SUMMARY

Full Stack & IoT Engineer with 2 years of experience specializing in production-grade web applications and real-time IoT platforms like BMS and ERP systems. Shown ownership across design, development, and deployment of industrial automation software using Java, C#, .NET Core, and cloud platforms. Sustained results by contributing scalable solutions supporting 500+ users with 99.9% uptime.

EDUCATION

Park College of Engineering <i>Bachelor of Engineering in Computer Science; CGPA: 7.4/10</i>	Coimbatore, Tamil Nadu <i>Aug. 2020 – May 2024</i>
Government Higher Secondary School <i>Higher Secondary (12th); 70%</i>	Krishnagiri, Tamil Nadu <i>Jun. 2019 – May 2020</i>

EXPERIENCE

Sustainabyte Private Limited <i>Full Stack Software Engineer</i>	Chennai, Tamil Nadu <i>Dec. 2024 – Present</i>
- Spearheaded full-stack SaaS modules using Next.js, Spring Boot, and .NET Core to support 500+ active concurrent users. - Incorporated Azure and AWS cloud services via custom C# and Java APIs to process over 10,000 data records daily. - Architected IoT data pipelines using MQTT and InfluxDB for real-time dashboards, reducing system response latency by 35%. - Ensured high-availability RESTful microservices using .NET and Spring Boot, maintaining a consistent 99.9% uptime record.	
Xentrix High-Tech Private Limited <i>Software Engineer</i>	Coimbatore, Tamil Nadu <i>Dec. 2024 – Oct. 2024</i>
- Developed backend services with Spring Boot and Node.js, handling 5,000+ daily requests with sub-200ms response times. - Automated internal ERP and BPO workflows using Java, resulting in a 45% reduction in manual processing requirements. - Orchestrated microservice deployment using Docker across the full software development life cycle (SDLC).	

PROJECTS

Energy Management System (BMS) <i>.NET Core, C#, Next.js, Azure, IoT</i>	2025
- Engineered a software-focused architecture using .NET Core for MQTT data ingestion, processing, and visualization from 50+ IoT devices. - Maximized energy efficiency by 25% through real-time InfluxDB monitoring and interactive Next.js dashboards.	
ERP Platform for BPO Operations <i>Java, Spring Boot, Next.js, MongoDB</i>	2024
- Established a custom ERP platform from scratch to automate document processing and BPO file allocation workflows. - Deployed scalable backend APIs using Java and Spring Boot for real-time tracking of file status and operational progress.	
Smart Reply Automation <i>Python, Node.js, Next.js, AI API Integration</i>	2024
- Leveraged AI models via API with Python and Node.js to automate intelligent customer inquiry responses. - Augmented workflow efficiency by automating high-volume repetitive replies based on historical interaction data.	
Welding Automation <i>Flutter, ESP32, MQTT, C#</i>	2024
Crafted a Flutter mobile app and C# backend for remote control of ESP32 welding systems via Bluetooth/MQTT.	
TRB TNPSC Mobile & Web App <i>MERN Stack</i>	2023
Implemented a full-stack MERN application for exam preparation with user authentication and performance analytics.	

TECHNICAL SKILLS

Languages: Java, C#, JavaScript, Python, HTML/CSS, SQL
Frameworks: .NET Core, Spring Boot, Node.js, React, Next.js, Flutter
Databases: MongoDB, SQL Server, MySQL, InfluxDB, Redis
Cloud & DevOps: AWS, Azure, Docker, Jenkins, Git, CI/CD
Technologies: REST APIs, Microservices, IoT, MQTT, ESP32
