SUMMARY

Full Stack & IoT Engineer with 2 years of experience specializing in production-grade web applications, mobile apps, and real-time IoT platforms like BMS and ERP systems. Proven expertise in building industrial automation software and AI-driven solutions using Java, C#, .NET Core, Flutter, and Python. Sustained results by contributing scalable solutions supporting 500+ users with 99.9% uptime.

EDUCATION

Park College of Engineering <i>Bachelor of Engineering in Computer Science; CGPA: 7.4/10</i>	Coimbatore, Tamil Nadu <i>Aug. 2020 – May 2024</i>
Government Higher Secondary School <i>Higher Secondary (12th); 70%</i>	Krishnagiri, Tamil Nadu <i>Jun. 2019 – May 2020</i>

EXPERIENCE

Sustainabyte Private Limited <i>Full Stack Software Engineer</i>	Chennai, Tamil Nadu <i>Dec. 2024 – Present</i>
- Spearheaded full-stack SaaS modules using Next.js, Spring Boot, and .NET Core to support 500+ active concurrent users. - Incorporated Azure and AWS cloud services via custom C# and Java APIs to process over 10,000 data records daily. - Architected IoT data pipelines using MQTT and InfluxDB for real-time dashboards, reducing system response latency by 35%. - Ensured high-availability RESTful microservices using .NET and Spring Boot, maintaining a consistent 99.9% uptime record.	
Xentrix High-Tech Private Limited <i>Software Engineer</i>	Coimbatore, Tamil Nadu <i>Dec. 2023 – Oct. 2024</i>
- Developed backend services with Spring Boot and Node.js, handling 5,000+ daily requests with sub-200ms response times. - Automated internal ERP and BPO workflows using Java, resulting in a 45% reduction in manual processing requirements. - Orchestrated microservice deployment using Docker across the full software development life cycle (SDLC).	

PROJECTS

Energy Management System (BMS) <i>.NET Core, C#, Next.js, Azure, MQTT, InfluxDB</i>	2025
- Designed software-centric BMS architecture using .NET Core for real-time MQTT data ingestion and processing for 50+ devices. - Built interactive Next.js dashboards for monitoring energy consumption, achieving ~25% improvement in efficiency.	
ERP Platform for BPO Operations <i>Java, Spring Boot, Next.js, MongoDB</i>	2024
- Developed custom ERP from scratch to automate document processing and BPO file allocation workflows. - Built scalable Spring Boot REST APIs and Next.js role-based dashboards to improve operational visibility.	
Welding Digitization & Tracking System <i>Flutter, Node.js, Next.js, Firebase</i>	2024
- Built digitization platform to track welding operations, operator activities, and production reports. - Developed Flutter app for floor data entry and Next.js dashboard for analytics with Firebase real-time integration.	
Welding Interlocking System <i>Flutter, C#, MQTT, Bluetooth</i>	2024
- Developed Flutter app and C# backend to manage welding machine interlocking and access control via MQTT. - Implemented real-time device status monitoring and controlled machine operation based on authorization rules.	
Smart Reply Automation System <i>Python, Node.js, Next.js, AI API</i>	2024
- Developed AI-assisted reply system using Python and Node.js to handle repetitive customer queries via third-party AI APIs. - Improved response efficiency by automating high-volume support workflows using context-aware responses.	
TRB / TNPSC Exam Management Platform <i>MERN Stack (MongoDB, Express, React, Node.js)</i>	2023 - 2024
- Designed end-to-end exam management system for preparation workflows, including scheduling and evaluation tracking. - Delivered complete solution as a freelance project, including deployment and admin dashboards for candidate management.	

TECHNICAL SKILLS

Languages: Java, C#, JavaScript, Python, Dart, HTML/CSS, SQL
Frameworks: .NET Core, Spring Boot, Node.js, React, Next.js, Flutter, Tailwind CSS
Databases: MongoDB, PostgreSQL, MySQL, InfluxDB, Firebase, Redis
Cloud & DevOps: Azure, AWS, Docker, Git, CI/CD, MQTT, Vercel
Technologies: REST APIs, Microservices, IoT, AI APIs, Bluetooth, WebSocket
